SUMMARY

Software engineer with over five years of experience in building maintainable and performant software solutions. Strengths in delivering well architected and tested code. Provides concise and actionable updates. Collaborates with cross-functional teams in a remote environment. Proficient in full-stack development in Ruby on Rails, React, PostgreSQL, and AWS.

EXPERIENCE

Greenhouse Software, Remote

Oct 2021 – Present

Software Engineer

- Remediate an issue where 500k outbound emails sent through SMTP service were being sent from the wrong domain.
- Built bulk employee import tool to speed up implementation time for new customers.
- Automate export of employee documents using Sidekiq and generate a S3 presigned url for customer ease of use.
- Spearhead the addition of two new admin roles from proof-of-concept to release.
- Reduce response time by 40% for commonly visited page by optimizing evaluation of employee permissions.
- Architect email notification to employees to complete their goals two weeks before they are due.
- Implement three new metrics for admins to view how effectively employees are onboarding in their first 30 days.
- Streamline pronouns and pronunciation data from Recruiting to Onboarding to prevent manually correcting data.
- Migrate background job processing from delayed jobs gem to Sidekiq to alleviate extraneous load on our database.

Slalom Build, Denver, CO

June 2019 – Sept 2021

Software Engineer

- Constructed global redemption rewards application using AWS Lambda, DynamoDB, APIGateway, and React.
- Revamped internal cloud management application using Angular, PostgreSQL, and Java with Spring Boot.
- Built out transformation system that ingested a CSV of validation rules to a fully built React page served using NextJS.
- Pioneered shared component library using React/MaterialUI to drive consistency between micro applications.
- Established website to showcase past hackathons and manage current hackathons using Angular, AWS Lambda, DynamoDB, API Gateway, and Cognito.

Station Casinos, Las Vegas, NV

June 2018 – August 2018

Software Engineer Intern

- Created micro-service to detect four-of-a-kind poker hands using MongoDB, Express.js, Node.js, and RabbitMQ.
- Collaborated with QA and test deployed code on slot machines.
- Participated in weekly tours with other departments in company to learn how business operates.
